I want to replace the last line, inside the loop, to be just this line: `re.sub(r'(\s){10}',"` line) This doesn't work, since the cursor is back at the end of the line after the loop is done, and I don't know why. It works for just the lines that are inside the loop, so when I run the whole script all the first lines are modified to be just the line with the

---

re.sub, but the last line isn't modified at all. I'm running Python 3.6.4 and the only thing that I can think about is that maybe is that my regex string is too specific so the cursor is right at the end of the line again. I don't know if that's possible, and I don't know if it's the reason. A: This is because you are replacing the end of the line with a space, and nothing is left to replace in the later lines. You probably want to replace the -or.{10} with a space that will not be matched. Try using r'\s' instead, for instance. re.sub(r'(\s){10}',' ', line)

[Percutaneous transluminal coronary angioplasty for infarction-related coronary artery stenosis]. We have performed coronary balloon angioplasty in a 61-year-old woman with acute myocardial infarction (AMI) and occlusion of the left anterior

---

descending artery (LAD). The patient had smoked 24 cigarettes a day for 50 years and was a heavy drinker. She had angina pectoris and developed AMI. Coronary angiography on admission revealed an occluded LAD. Percutaneous transluminal coronary angioplasty (PTCA) was performed by using a 6F guiding catheter. A tube-like stenosis of 90% in the proximal portion of the LAD was seen with the location of the occlusion. The stenotic lesion was dilated with a 2.5-3.5 mm diameter balloon (Microfloss) for 30 sec, resulting in a 30% residual stenosis. Myocardial scintigraphy with  $^{201}\text{Tl}$  was performed on Day 3 and Day 10 after the PTCA. Abnormal perfusion areas in the heart were recognized in the right heart and left ventricle

How to Crack Pointex Points de Vente FirstMag.rar Download the Pointex Points de Vente FirstMag.rar Unzip the Pointex Points de Vente FirstMag.rar Run the Pointex Points de Vente FirstMag.rar You Done!

Understanding the concept of informed consent in the Israeli and Jordanian private sector is rare, especially in a context of ethical challenges brought

---

about by the COVID-19 pandemic. Informed consent in Jordan and Israel is addressed as a basic legal obligation, a requirement to protect human rights, a patient's right to health care, and a practice that ensures clinical autonomy. These three concepts, individually, are generally accepted to address bioethical challenges. However, they do not address the underlying phenomenon that pervades the two countries---the consolidation of patient dependency during the COVID-19 pandemic. With all this in mind, we sought to understand informed consent in private practices in both countries, especially the changes occurring in both countries during the COVID-19 pandemic. The structure of the study was developed from the Consolidated Framework for

---

Implementation Science, to which the authors applied an adaptation of two constructs. The first was confirmation of the ambiguity, complexity, and uncertainty surrounding the ethical challenges brought about by COVID-19. The second was the need to understand the role of communication between patients and their providers and the ethical reasoning underlying their experience with informed consent. Findings of the survey, to date, in both countries are summarized in [Fig. 1](#f1-wjem-21-396){ref-type="fig"}. The structure of our survey allows us to explore the response of the private sector to the current pandemic in two countries. The results of our survey indicate that there are specific differences between the two countries. A more thorough investigation

---

into the given results is warranted in subsequent studies. In Jordan, the results of our survey indicate that the COVID-19 pandemic has been a silent revolution for
