Bheema Theeradalli Movie 2018,4-(2-Phenoxy)benzamides as a novel class of inhibitors of multi-drug resistance transporters. The emerging resistance of cancer cells to anticancer drugs presents a serious problem for chemotherapy. ATP-binding cassette (ABC) transporters are a group of P-glycoproteins that are involved in the multidrug resistance (MDR) of cancer cells. We have previously shown that 4-(2-pyridyl)benzamide derivatives have a high MDR-inhibiting activity and are potent anticancer agents. In the present study, we synthesized 4-(2-phenoxy)benzamides to improve the potency of benzamides, while retaining the beneficial activities of benzamides. The anti-MDR activities of the synthesized compounds against MDR1 and ABCB1 were evaluated by a drug efflux assay. The effect of these compounds on the accumulation of an anticancer drug, doxorubicin, was also measured in both ABCB1-overexpressing K562 and ABCB1-negative HeLa cell lines. The compound 6h potently and reversibly inhibited both ABCB1 and ABCC1 activities. Interestingly, 6h enhanced the cellular accumulation of doxorubicin in ABCB1-overexpressing K562 cells and inhibited the efflux of doxorubicin from HeLa cells. Furthermore, the effects of 6h on the proliferation of K562 and doxorubicin-resistant K562/Adr cells 2d92ce491b
