Bhagat Singh's poem from Raja Dhian Chand: Atheist Geeta Mehta writes a reader's perspective on the poem: Z. M. Zaidi writes about the poem: Bhagat Singh story Hajra Masroor was well known as a feminist in those days, and feminist writers in that country used to refer to both her and her sisters and other women in the same way. This poem, as well as the other three poems by Bhagat Singh, belongs to that tradition. The title itself means "my people", and the meaning is clear by the end of the poem, when Bhagat Singh says that "My country is my people." Bhagat Singh's poem from Raja Dhian Chand, released in 1916: References Category:Urdu poetry Category:Pakistani literature

The present invention relates generally to a mechanical shut-off valve of the type in which an object, e.g., a conductor, is inserted between two closure members for closing and opening the valve, and more particularly to a mechanical shut-off valve in which a pair of closure members are coupled to each other to be moved with respect to each other by a pneumatic or hydraulic cylinder inserted in the valve. A mechanical shut-off valve of this type is used in a nuclear reactor power plant. There is a well-known type of a mechanical shut-off valve that includes a plurality of metal elements for respectively forming two closure members coupled to each other to be axially moved. The metal elements are arranged in two rows, respectively, so as to be coupled to each other to be axially moved via a pneumatic or hydraulic cylinder inserted in the valve, and each metal element includes a pair of axial end faces having a plurality of circumferentially spaced and radially extending support slots formed therein and extending axially, i.e., in the axial direction of the cylinder, to support a respective one of the metal elements on the cylinder. The metal elements thus support each other to be moved with respect to each other. The conventional mechanical shut-off valve having the foregoing structure is provided with a pair of annular steel rings for respectively forming one pair of circumferentially spaced and radially extending slots axially extending in the axial direction of the cylinder so as to match respectively the axial end faces of the metal elements. The steel rings are coupled ba244e880a
