Quickly add or multiply several monetary values with this little-known and little-used feature of Windows. You can open and run this program in a hurry, with only a mouse and keyboard. This feature takes all the hard work out of calculating and maintaining financial systems like bank accounts, credit cards, personal accounts, etc. A working "Payment Scheduler" option will appear on the start menu if the program is installed. When "View help" is selected (or F1 for the keyboard layout), a popup window opens with a list of available commands with usage tips. The "Quick Add" command opens a dialog box that lets you enter and operate on the current displayed value, while simultaneously adding a second input value. The program shows buttons in the bottom-right corner of the dialog box and automatically places the dialog box in the background. "Add to" buttons act like a task list. Each input item is selected by clicking on the desired button, and can be added to (or subtracted from) an existing list. You can also right-click on a button to add a new item. Items from the existing list can be deleted with the "Delete" option. Each input box is added to the list and the total at the bottom of the list. Additional program features include: - Add totals and sub totals - Magnify or reduce a displayed value - Scrub values with the left and right mouse buttons - Double-clicking on the window's left border button does not bring the dialog box into focus. Double-click on the border will always bring it into the foreground - Exiting the application with the "Back" button or pressing ESC closes the dialog box. Note: using the ESC key will exit the application and close the dialog box. The dialog box will remain on the screen until manually closed. Features: Add, Subtract, Divide, Multiply, Currency Calculate totals for each item Determine the overall total Display totals and sub totals in various formats Display decimal places Generate Exact Sum Generate Last two digits Generate Tally Calculate Average Total columns Reports Result History (shows any changes over time) How to set up Installation: Run the setup file. It should detect the version of Windows. Pick the folder where you want to install the files. Close the program and restart your computer. Choose which language you want to use.

The objective of this small and very simple utility is to help you calculate your daily income and expenses. In particular, it can generate an independent as well as a cumulative daily, weekly, monthly, and yearly income. The second type of information and calculation pertains to a monthly, quarterly, or yearly expense. This way, you can check the financial status of your personal budget or you can even generate a month-to-month profit or loss report. In addition, you can also import your budget data from an Excel-like file where you can later make modifications, or even generate a chart showing all your monetary transfers. Additionally, you can download other essential utilities, such as Currency Converter or Interest Calculator from this same page. ...
