What's New In?

After purchasing and installing, you will see the basic GUI. Here, you can either leave the program as-is or modify its settings. In the Options menu, you can select either the Cloud Mode, the Local Mode or the Automatic mode (the latter being the default). In the Cloud Mode, you can choose your cloud service provider and modify the backup interval (in minutes) and locations where data is saved. In the Local Mode, you can customize where the backup data is stored (after a certain date) and set backup intervals. The program automatically copies your media data into a cloud storage provider, either Google Drive or Amazon Drive. You can define the location where you would like the backup data saved: Google Photos can be selected here. The program is designed to be unobtrusive; however, it runs in the background and is easily accessible via the tray icon. You can initiate a new backup manually at any time. After you set the backup interval and the desired location of data storage, you can optionally set the program to automatically copy your media data into the cloud. The program works via an optional smart phone application. You can create a backup of your files with your smartphone while you use them. The application is straightforward to use and does not require any advanced knowledge; however, you may want to use the Smartphone mode only when you are at home or at work, as this can be accessed only from there. Basic: Automatic upload of all photos taken on a smartphone to Google Photos and to Amazon Drive; Automatic backup of photos to Google Drive. Premium: Automatic upload of all photos taken on a smartphone to Google Photos and to Amazon Drive; Automatic backup of photos to Google Drive, plus: Photos are automatically sorted by date and time; Saves high quality images in Google Photos and uploads to Amazon Drive; Uploads photos to other cloud storage services if enabled in the option settings; Automatic backup of photos to Google Drive; Automatic backup of photos to Google Drive in the Smartphone mode; Optionally integrates with several social networks, including Facebook and Twitter; Updates (replaces) existing files in Google Photos and Amazon Drive. XShare: The XShare is the most lightweight and easy to use Google Photos manager on the market. Designed to make the backup process as convenient as possible, it includes all of the features of the Google Photos backup application as well as support for all major cloud storage providers. XShare supports automatic backups and uploads of images to the cloud. You can also select multiple photos and automatically organize them by date and time. This can be very useful if you want to check on your Google Photos backups regularly. This free Google Photos manager application can be installed on a smartphone and will automatically backup your photos to the cloud storage provider of your choice. Of course, you will need to purchase this app.

System Requirements:
