A Quick Guide to Photoshop When most people think of Photoshop, they think of one of the most complex programs for use in graphic design. The program requires an understanding of programming to use it the most effectively, and it is a great tool for image manipulation. It offers many tools in its software toolbox for creating and editing raster-based images, that is, images that are used in the most common image printing platforms (cameras, scanners, printers, and digital photocopiers). Photoshop is based on layers, which is how they are organized in the program, and that's how you will likely organize most of your images. Photoshop layers contain one or more Photoshop elements. A Photoshop element is a collection of layers made by a single layer in the Photoshop layers palette. Each element can be a layer or a saved selection. A Photoshop element is a collection of layers in the layers palette that can be combined with other elements of the same type to make the finished image. A "shortcut" is a folder that contains a group of Photoshop elements. You can save layers as Photoshop elements in shortcuts for easy access, and then you can import them to Photoshop with the shortcut. A photographic image is made up of a collection of layers, including adjustment layers, which control the overall look of the image and specific layers for processing. The adjustments are slider bars that affect the basic color of the image. A particular adjustment layer can be displayed in the layers palette with a white or black fill. The adjustments make up the filter settings of a particular layer. Filter settings apply one of the Photoshop filters to the layer. You can apply the same filter to other layers or to the entire image. The filters create a new look for an image, regardless of how it was captured. Layers are composed of layers, which are also called "effect layers." Elements are effects you apply to one layer, but the layers are still Photoshop elements in a different state. Each Photoshop element has its own editable properties, including color, curve, hue, lightness, and saturation. When you are making adjustments to the image, the editable properties apply to the whole image. Each adjustment is like a different part of the image. You can change the editable properties individually, or you can apply them all at once by using the entire adjustment layer. Layers are organized in a list format with

With the recent launch of Cloud Imperium's Bantam One: Rising, we've heard a lot of stories about the game's players. We're happy to see an increasing number of new players and, more importantly, an increasing number of experienced veterans. RSI is working on some hot fixes to improve the game, including another round of balance changes. Today, we want to talk about a few of these changes. Scrap for Profit The Scrap for Profit system (which allows players to auction scrap they've earned in game) is now pretty much exactly what the name implies. If you take the time to search through your inventory, you can actually sell all the scrap you have right now. When you do, you'll get payouts at a rate of about 40% of the value of your inventory in 100 scrap. This means you can generally expect to come home with about 25 pieces of scrap for every 50 you open at the recycling station. As this is a pretty significant change, we've renamed the "Recycling" tab to "Scrap" so you can avoid missing your opportunity. We're also adding a prompt to the "Scrap" tab which will help remind you to check the scrap tab when working on your list of inventories. Armored Tanker armor setup has been given a slight nerf to account for its popularity. This doesn't have a huge impact on armor, but should allow people to build themselves a tank that is a little more durable without making it too difficult to kill. Additionally, the M1A2 was given an increase in stats to increase its effectiveness on the battlefield. This should make the M1A2 more attractive as a tank since it should be able to be built much more cheaply and be more effective in combat. Vehicle & Structure Changes Vehicles can now be built by warping in and out of various instances. You can use an instance to build a new ship, repair damaged ships, or simply to sell your ships. This provides a few new ship vending opportunities. You'll see new buttons in the Structure/Mechanics window. This opens a webpage where you can build new vehicles, factories, shield generators, and structures. Both the central market hub in FPS Intercom and the Arena Service Center in FPS Blitz are now fully active.
