“FIFA 20 was a huge success for the series, and the team at EA SPORTS is continually looking at ways to improve, innovate and ensure FIFA continues to offer new and enhanced gameplay experiences and moments to capture the hearts and minds of fans,” said Andrew Wilson, FIFA Brand Director. “HyperMotion Technology is a game-changer for FIFA and with the largest set of player data to date, we’re set to deliver the most authentic, physical and realistic gameplay yet.” HyperMotion Technology unlocks a new set of gameplay possibilities, with players walking in ways they have never before been able to. Each player now moves, tackles and sprints like they are in the real world, as if the ball was in their feet. Players are able to weave their way through opponents, meet and find space between defenders and slide to the outside of the pitch. “FIFA 20 was a great game,” said David Rutter, Senior Producer at EA SPORTS. “We were able to collect over 37,000 hours of ultra-high-resolution motion capture data from over 100 players, including over 100 different player and team suits for the game. We are excited about bringing players the ultimate version of FIFA on PlayStation 4. It will feature footballing expertise from the best in the world and our new ‘HyperMotion Technology’ is our most significant advancement ever.” In addition to the introduction of HyperMotion Technology, Fifa 22 Crack Mac introduces new gameplay features and areas of improvement, including: New Player Styles – Each player now has their own movement style, defined by traits such as Stamina and Charisma. Players can now control their stamina by pausing games and maintaining the pace of the game, allowing for control on the pitch and more free-flowing action. Players can also use Charisma to make more passing and shooting decisions in the heat of the game. Personalised Fouls – Every player now has a set of personal fouls that could be committed on the pitch. This adds another layer of strategy as players can use these tactics to earn free-kicks, advantage or keep possession. Passing

---

Physics – Players can now pass the ball more fluidly through the air with the Real Pass Physics engine. This makes for a more realistic take on the game, which helps create variety in tactics and keep the game unpredictable. Dispersal Mechanics – Players can also use items such as Interceptions, Aerial Duels,

Before the 1997 launch of EA Sports’ FIFA, the most successful sports simulation game of all time, this enormous sports sim franchise had been nothing more than a series of colourful, peripheral-dependent football sims. (FIFA being the one exception, due to some mischievous people with an uncanny ability to reverse engineer the game engine.) EA Sports brought a level of realism and overall polish to the series that hadn’t really been seen before. The gameplay was smart, the graphics were some of the best seen in a sports game up to that point, and the soundtrack and production values were outstanding. Over the years the series has always been about pushing the bounds of what’s possible in a football game. Some of the advancements in FIFA have been driven by fan feedback, while others have been done purely for innovation’s sake. For example, before FUT the ability to create a manager never really made sense in FIFA. FUT changed that. While it’s often been about adapting the core gameplay, many of the real innovations have been in the growing array of modes available. And given the success of FIFA and the plans for the future of the series, it’s been a pretty good run. The big question is: what’s next for the series? What could be next? EA has a good track record of titles that have become living legends over the years. The Madden, FIFA, Tiger Woods, and NBA series are among the most memorable and playable games of all time. And of course, sports series such as PES and SSX are nothing short of memorable. With each new EA title, it’s always been exciting to see what they have in store. While the last few years have seen some

great sports games - ranging from the excellent Ultimate Team to the fast-paced and deep Apex Legends - there's been a real lack of innovation in recent years. The inclusion of the Gun camera and the inclusion of non-player characters (NPC) in Managerial mode were good moves, but FIFA 20 and the coming FIFA 21 were quiet on the innovation front. EA's focus appears to be on creating something new in sports games rather than taking the core gameplay and polishing it further. Could a set of ideas outlined in an IGN interview with Daniel Johnson be the result of an actual team innovation? Hardcore and Casual We've seen bc9d6d6daa
