Although Photoshop does provide the most powerful image editing features, you can take advantage of other image editing applications as well, such as the free, cross-platform GIMP, shown in Figure 14-5. GIMP has a slightly different style of interface and lacks some of the more useful Photoshop features, but a skilled Gimp user can still create some impressive images. Photoshop Elements is geared more toward an amateur editing method than a true Photoshop pro, so it's worth exploring before even considering purchasing the more expensive, full-featured Photoshop. **Figure 14-5:** A powerful editing tool that can produce more professional-looking images than Photoshop for free. You can use Photoshop to manipulate images for print. But you're not limited to print. You can use images for websites as well. The main benefit of the web is that you can use the same image for both print and for the web, and if the image is a bitmap, you can crop the size of the image to fit whatever you need. Photoshop gives you tools to crop, rotate, make color adjustments, add or remove a layer, and so on. You can even crop and rotate layers without even using Photoshop. Chapter 16 covers these kinds of steps in detail. How the typical Photoshop user works with her images Although you can use Photoshop as a more or less advanced image editor, most people start out using Photoshop with no intention of ever becoming an expert. In this chapter, I focus on how most people start out. Understanding the toolbars You can control most Photoshop's tools and features by using the tools along the top of the program window, as shown in Figure 14-6. However, I recommend you leave the toolbars visible while you work because they contain useful features, such as the ability to add and delete layers and layers, or to make color adjustments. A few of the features on the toolbars aren't as useful as they may first appear. With the Layers tool, for example, you can activate it by simply clicking on the tool's icon or by pressing Ctrl+Tab. Both these methods activate Photoshop's layers-picker window, shown in Figure 14-7. You can click and drag the swatches around on the fly until you find the color you want. **Figure 14-6:** The top toolbar displays many of Photoshop's most important tools. **Figure 14-7:** You can always access the L

OK, here's the real-life Godzilla. 1) This is a breaking story! A massive earthquake has struck Japan! The epicenter of the quake was just off the east coast of Japan! Russia's TASS news agency has just sent out an official statement reporting that they have detected 615 earthquakes this morning! This news was just announced on Japan's Fukushima disaster area! The Japanese government has just announced via Twitter that the number of dead and missing is now at 7. But they say there may be more. It's still very unclear exactly what the situation is. But we're very glad that no nuclear power plants, any way, have experienced any damage. More than 100 nuclear plants across Japan (all but one have been shut down) are now expected to be deactivated in the coming hours. Nuclear and anti-nuclear groups throughout the world have been in an uproar ever since this morning's earthquake happened. The United States, Russia, China, Italy, France, Great Britain, Germany, and of course, Japan, have all announced that they will shut down their nuclear plants. Wow, this was really unexpected. Please post any updates. The Japanese government may activate more nuclear power plants now that so many were crippled in this morning's quake. 2) Thousands of people are dead, but we don't know how many. The tragedy that has struck this morning is all caused by a magnitude 9 earthquake that occurred just off Japan's eastern coast. That earthquake was extremely powerful. The magnitude of this quake is still being evaluated, but there are reports that it may have been 9.3. So, the magnitude of the quake is the highest of any major earthquake in recorded history! There are lots of problems that have resulted in the earthquake and its aftermath. Here are some of the top ones. Tsunami Tsunami 1) Tsunami. A tidal wave is what we're seeing. It's been reported that the waves may have reached as far as 60km offshore! Thousands of survivors are trying to make it out of the affected areas and have now been trapped by the surging floodwaters. Still, people in Miyagi, the worst-hit area, have made it out of the house they were in and safe. But thousands of people are still missing in

Music Spotlight: Sonny Criss I've met a lot of wonderful people from the cast and crew of the show this season, but none who I quite enjoyed meeting and talking with as much as I did Sonny Criss. Sonny is a great musician and has been jamming with many of the cast and crew for several years now. He has a great, fierce and technically stunning guitar playing. I personally couldn't help but be inspired by his musical prowess and his passion for rock. He also has a great sense of humor and a kind and friendly disposition. The episode we worked on in this season was titled "Dog Day Afternoon" and dealt with many complex issues and emotions, none of which he reacted poorly to. I definitely got the sense that as a musician, he was feeling inspired and happy about this segment of the show. One moment that stood out in my mind and memory from our time together was when he commented that no matter how much energy and time you put into your music, it will always be a small part of what you are trying to accomplish. To hear his word of wisdom on how he pursued his passion so diligently, I'd say that he's definitely on the right track. Thanks, Sonny, for taking the time to talk with me, and a big thanks to N for letting me catch up with him and take his pictures. Also, thanks to all my family and friends who I've had the pleasure of talking with as we've rehearsed and filmed the past few weeks. You've all been incredibly supportive and helpful. I really appreciate that!Part of what the U.S. Commerce Department -- the agency in charge of regulatory agencies -- sees in the 5G market is that there are no standards for spectrum use. "We're also concerned that we have a growing number of unlicensed users... who are capable of interfering with the services or interfering with the performance of other uses." So, in order to guard against this, the department set up a task force to investigate where the technology stands and identify problems. The report's recommendations are, at times, a little on the goofy side, but they really laid out the problems right there on the table. The report's recommendations are pretty simple: work on reducing interference, work on sharing spectrum more efficiently and work on improving 5G technology. As for reducing interference, it's both an environmental and an aesthetic problem, as well as a socio-political issue. "In some cases, radio frequency spectrum is scarce and the community
